Avanza revisión de sistema eléctrico en diez viviendas de emergencia

Por Francisca Pacheco Pérez

economia@diarioelsur.cl

Authorities of the Seremi de Energía and the Superintendencia de Electricidad y Combustibles (SEC), in coordination with local authorities, have conducted a series of inspections on the electrical systems of the emergency housing solutions that Senapred provides in the context of the forest fire disaster.

"The emergency housing is regulated by Resolution Exenta 2161 of Senapred and the Ministry of the Interior, which requires a certain standard of habitability and includes the fulfillment of the electrical normative. What we do is verify that it complies", pointed out the Seremi of the ramo, Danilo Ulloa.

In the first stage, ten inspections were carried out in the affected communes, through the revision of the interior of the provisional buildings and their electrical connections. "After arriving at the first ten houses, we also visited the Punta de Parra, Penco and Lo Tato sectors in Concepción. We are carrying out a revision of the electrical standard of energy, of the electrical installation", expressed the authority.

At the moment, they have detected and corrected some minor deficiencies in the electrical installation to the ground.

CRITERIOS TÉCNICOS

"In the case of the connections, it is required that they be made with the correct tools, that the box is sealed, that it does not leak water and that it is correctly connected to the ground", explained.

The authorities fiscalize randomly the solutions of habitability that Senapred grants to the victims of fires, to ensure the fulfillment of the technical standards required. In this first phase, minor deficiencies have been detected in the connection to the ground.

Se han revisado inmuebles en Tomé, Penco, Concepción, Nacimiento y Laja.

It is noted that the box is provided with four outlets, with their respective switches and safety devices, which are correctly connected to the ground over a long period of time.

"Generally, they connect to the neutral, but they must be connected to the ground bar that goes to the ground. After we have made the observations and corrected them", affirmed the Seremi. In addition, in the interior of the house, "what we do is the revision of the connection, which must be made with a minimum distance of 60

centimeters from the centers of the units, in this case the shower", he said.

DESPLIEGUE EN TERRENO
The authority explained that before the difficulties of the SEC to fiscalize the total number of houses, the revisions were carried out in a random manner.

"We sum the location of the outlets and the centers of illumination, over all in the bathrooms. In the case of the outlet, it must be made with a minimum distance of 60

2161

es la Resolución Exenta que define estándares de habitabilidad en viviendas de emergencia, incluyendo sistemas eléctricos.

EE

Tenemos que ver que el estándar se siga cumpliendo, en eso estamos dedicados. Este es un proceso que está en marcha, y cuando nos llega la información y la ubicación de la vivienda concurrimos a visitarla".

viviendas of a total of ten, in Nacimiento we have revised two, in Penco is a similar figure and in Concepción also. For example, in Penco we are still in the ground and at that moment we were still revising the houses, so there are some pending issues", he said.

After this initial sample, the inspections will continue to measure the implementation of these transitional solutions in the affected communes. "We have to see that the standard is met, in that we are dedicated. This is a process that is in progress, and when we receive the information and the location of the house we will visit it", he said.

For this, they maintain coordination with Senapred, the entity responsible for the delivery and installation of the provisional houses, as well as with the General Electric Company (CGE), which provides the service. "We are in permanent contact with the mayors and their equipment of emergency, and we are working with the SEC to carry out the respective revision", he said.
